

# LOOK

**AT THE FUTURE  
OF DVD**

### The Future of DVD is here now!

From now on, NUON™ technology turns DVD Players into Total Interactive Entertainment Centers. NUON makes movies better, brings music to the big screen, games to the DVD Player – and provides many other cool features not found on any other DVD Players.

### Closer...Closer...

With the new generation of NUON-enhanced DVD Players you can expect advanced, yet simple to use movie playback and special features. Ultra-smooth scanning in both forward and reverse.

The most powerful viewer-controlled selective zoom with incredible clarity and effortless panning to pinpoint the portion of the scene you really want to see.

Unique on-screen Graphic User Interfaces (Menus) for easy navigation and adjustment without missing a moment of the movie.

Capture fast moving action with a multi-picture strobe or select just the right angle from a series of different shots thumbnailed at the bottom of the screen – all as the movie plays on. A fine-tune feature allows you to bring dark scenes to light – see what you miss on basic DVD Players.

### Closer Still...

Check out the upcoming NUON-enhanced movies that Hollywood studios are working on. They'll bring you extra content and features only available through NUON-enhanced DVD Players, either right on disc or accessible on the Web.

Soon you will be able to get to the Web with the NUON Internet Connectivity Kit.

Drop in your favorite audio CD and bring the music to life on your TV screen with magical patterns of color and light. Play classic and family games like Monopoly®, Tempest 3000™ and Myst®, right on your NUON-enhanced DVD Player.

It all comes down to the amazing, must-have NUON Technology – the closer you look the better it gets.
