become an experience. A NUON-enhanced DVD player delivers an interactive DVD experience on the television, currently available only on PCs with DVD-ROM drives. A new world of movie entertainment is made available through features such as customized user interfaces, interactive browsing of movie scripts and storyboards, real-time access to film Websites, live Web events, games, and other exciting goodies. NUON complements the Open DVD standard, applying advanced trick modes to a vast library of pre-existing film titles.

From games to edutainment, a diverse collection of interactive titles provide entertainment for the whole family. The best software makers from around the world recognize the limitless possibilities of an advanced game system capable of sophisticated film quality graphics and never before seen special effects. And it's delivered to consumers in the video device at the heart of the living room entertainment center. A complete range of NUON peripherals include controllers, joysticks, steering wheels, keyboards and more.

The growth of the Internet is exploding. NUON gives everyone the opportunity to share in the wealth of information and entertainment that can only be found on the World Wide Web. Functions such as Web browsing, e-mail, and network gaming, are delivered through a built-in modem or an add-on Internet kit. NUON defines convergence in video entertainment.

And it doesn't stop at DVD—the powerful and versatile embedded NUON technology transforms any digital video product, such as digital satellite receivers and digital set-top boxes into interactive multimedia centers. NUON is the front line of the digital video entertainment market of tomorrow.
